

Coachella Database SQL Code

Data Source(s):

1. The data used for some of the tables such as Artists, Stages and Areas were collected from the festival's official page.
2. On the other hand, the unobtainable data such as Buyer, Order and Employees info was created using "Mockaroo" to use as a representation of the real information.
3. We decided to use a smaller population of data, since it is used to mostly represent the relationships and interaction of entities which could help with Coachella's overall operation on several different aspects.
